

Abacide® 2 Label Amendments

The new Abacide® 2 Gen II and Hp labels now provide a wider application for insects that feed within phloem tissues, such as “*Clear-wing Borers*” and many “*Conifer Bark Beetles including Ips Engraver Beetle, Mountain Pine Beetle, Southern Pine Beetle, Spruce Beetle, Turpentine Beetle, Western Pine Beetle and Scolytid Bark Beetle*”.

Rates now range from 1-20 ml per inch diameter (insect dependent) and will provide from 1 to 2 years control of these pests.

Early trials with EAB are showing promise but the untreated control trees must show damage before applying for a label amendment to add this significant pest to the existing label.
