## Mauget introduces liquid loadable microinjection refills

Apr 1, 2009  
Athletic Turf News

ARCADIA, CA — J.J. Mauget Co. introduces its new line of refillable microinjection chemical technologies, Liquid Loadables.

Liquid Loadables are one-liter bottles of Mauget's insecticides, fungicides, antibiotics, fertilizers and micronutrients that tree care experts can use to refill their preferred injection system, allowing them to pair their tools with tree care chemistry.

"Some tree care professionals prefer microinjection to microinfusion. We recognize that, so we created Liquid Loadables to offer those professionals the best chemistry to use with their refillable microinjection tools," said Nate Dodds, president of J.J. Mauget Co.

Mauget currently offers the Liquid Loadable products Imicide, Stemix Plus and Inject-A-Min Manganese, with Fungisol, ArborFos, Abacide 2 and Tebuject 16 pending EPA approval. Mycoject Ultra antibiotic will be available in September 2009.

Fungisol, a proprietary fungicide, manages more than 30 foliar and stem diseases like anthracnose, bleeding canker and various wilt diseases.

Imicide insecticide is used by the USDA and numerous state governments to prevent and eradicate pests like the Asian longhorned beetle, and is one of the most effective methods of prevention and control of the Emerald ash borer.

Stemix Plus fertilizer stimulates foliar and root growth using chelated chemicals with a low salt index and elevated levels of magnesium and calcium.

For more information about new Liquid Loadables or any Mauget products, call 1-800-TREES Rx or visit [www.mauget.com](http://www.mauget.com).
